

KW:ahh022703/8271016.AMD

Donald
generically to include any yarn, fibre, filament or equivalent component of a workwear fabric, strip or tape. At least some of the electrically conductive yarns may be formed from a carbon-coated polyamide or a conductive polyester.

In the Claims:

5 Please amend the claims as indicated below in clean version of each replacement claim:

10 1. (Twice Amended) Antistatic workwear comprising a plurality of components
incorporating first electrically conductive yarns, and an electrically conductive member bridging
the junction between adjacent components, wherein the electrical conductivity between adjacent
components is enhanced by forming the electrically conductive member from a strip or tape
15 incorporating a plurality of second electrically conductive yarns which are of larger diameter than
said first electrically conductive yarns, portions of the second electrically conductive yarns are
exposed along the length of the strip or tape alternately on a first side and a second side of the
strip or tape, and the component and conductive member are attached to one another such that
the second electrically conductive yarns are urged into electrically conducting engagement with
at least some of the first electrically conductive yarns in both adjacent components.

2. (Twice Amended) Antistatic workwear, according to Claim 1, in which the second electrically conductive yarns are sharply bent by the structure of the strip or tape to promote a corona discharge.
